right bucket band upper edge.

3

I claim:

1.

1	A bucket carrier made from rubber sheet material comprising:
2	a central strip with a left end and a right end;
3	a left front band portion with a left front band upper edge integral with
4	the left end of the central strip, a left front band lower edge, a left front band free end,
5	and a left rear band portion integral with the central strip and the left front band
6	portion;
7	a right front band portion with a right front band upper edge integral with
8	the right end of the central strip, a right front band lower edge, a right front band free
9	end, and a right rear band portion integral with the central strip and the right front
10	band portion;
11	a left joint connecting the left front band free end to the left rear band
12	portion to form a left bucket band with a frustoconical left bucket receiving passage;
13	and
14	a right joint connecting the right band free end to the right rear portion
15	to form a right bucket band with a frustoconical right bucket receiving passage.
	2.
1	A bucket carrier, as set forth in claim 1, including a left upper tongue
2	integral with a left bucket band upper edge, and a right upper tongue integral with a

11

A bucket carrier, as set forth in claim 1, including a left lower tongue 1 integral with a left bucket band lower edge, and a right lower tongue integral with a 2 right bucket band lower edge. 3

4.

A bucket carrier, as set forth in claim 1, including a first anti-abrasion flap integral with the left bucket band lower edge, and a second anti-abrasion flap 2 integral with the right bucket band lower edge. 3

> √ 5.

A bucket carrier cut from a flat sheet flexible resilient material comprising:

a central strip with a left end and a right end;

a left side front band portion with a left arcuate upper edge integral with the left end of the central strip, a left arcuate lower edge, a left side front band front band free end, and a left side rear band portion integral with the central strip and the left side front band portion;

a right side front band portion with a right arcuate upper edge integral with the right end of the central strip, a right arcuate lower edge, a right side front band free end, and a right side rear band portion integral with the central strip and the right side front band portion;

a left side joint connecting the left side free end to the left side rear band portion to form a frustoconical left bucket band with a left band vertical height that is at least one-third the height of buckets to be carried and forms a left bucket receiving passage with a left passage upper diameter that exceeds a left passage lower diameter; and

a right side joint connecting the right side free end to the right side rear band portion to form a frustoconical right bucket band with a right band vertical height that is at least one-third the height of buckets to be carried and forms a right bucket receiving passage with a right passage upper diameter that exceeds a right passage lower diameter.

6.

A bucket carrier, as set forth in claim 5, including a left upper tongue integral with the upper edge of the left bucket band and a right upper tongue integral with the upper edge of the right bucket band.

7.

A bucket carrier, as set forth in claim 5, including a left lower tongue integral with the left lower edge of the left bucket band, and a right lower tongue integral with the right lower edge of the right bucket band.

10

11

A bucket carrier, as set forth in claim 5, wherein the left bucket band includes a left side anti-abrasion flap integral with the left arcuate lower edge, and wherein the right bucket band includes right side anti-abrasion flap integral with the right arcuate lower edge.

9. ·^\

applying an adhesive to right rear band free end and a right front band

A method of making a bucket carrier comprising: 1 cutting a one piece bucket carrier blank from a sheet of rubber material; 2 wrapping a left front band portion and a left rear band portion of the 3 bucket carrier blank around a conical surface; 4 overlapping a left rear band free end and a left front band free end; 5 applying an adhesive to the left rear band free end and the left front 6 band free end to form a left band with a left bucket passage; 7 wrapping a right front band portion and a right rear band portion of the 8 bucket carrier blank around a conical surface; and 9

free end to form a right band with a right bucket passage.
